FloBoss™ 107 IEC 62591 Interface

The IEC 62591 Interface allows a FloBoss 107 Flow Manager (FB107) to communicate with any mix of up to 20 WirelessHART® field devices. The module supports monitoring of both the process information contained in the flow computer and the intelligent diagnostic information residing in the WirelessHART field devices. The module can also be used for discrete control applications.

The IEC 62591 Interface consists of two parts: the Emerson Wireless 781 Field Link that provides the radio link to the WirelessHART field devices, and the IEC 62591 Interface Module that installs into the FB107.

The IEC 62591 Interface module is a key component in the Smart Remote Automation extension of PlantWeb. The IEC 62591 Interface module provides the FB107 with Plantweb® Smart Remote Automation functionality. This includes the ability to pass HART data bi-directionally through the network to AMS™ Device Manager software.

WirelessHART Networks

WirelessHART networks provide 99.9% network reliability—reliability that is unmatched by other wireless sensor networks. WirelessHART networks achieve this performance by being self-organizing and self-healing mesh networks. This means that each device on the WirelessHART network has multiple communication paths, and support automatic path configuration. If one path is obstructed, the network automatically re-organizes and transmits data along another path to achieve a successful transmission. WirelessHART networks ensure that you always have access to the field information when you need it.

Information transmitted on the WirelessHART network is protected by 128-bit encryption, user-definable network key, and frequency-hopping spread spectrum radio signals.

Scalability

The IEC 62591 Interface can support up to 20 wireless field devices. Once your initial network has been installed, it is quick and easy to add additional devices, allowing you to plan a large installation and add devices over time. Once a WirelessHART device is configured with the Network ID and Join Key, simply install the device in the field and it is automatically detected and reconciled through ROCLINK™ 800 Configuration Software.

WirelessHART Communication Statistics

Detailed communication statistics are accumulated for the wireless network. Transmitted and receive data is accumulated for byte, message, session, tunnel, radio and other HART messages.
WirelessHART Data Access

The IEC62591 Function Block is pre-configured to return the Universal and Common HART parameters including:

- Long Tag
- User Defined Message
- User Defined Descriptor
- Extended Device Type
- Device ID
- Manufacturer ID
- Device Serial Number
- Adapter Type – THUM’s Expanded Device Type
- Adapter ID – THUM’s Device ID
- PV, SV, TV and QV Variable Units
- Slot 0, 1, 2 and 3 Variable Units
- PV, SV, TV and QV Variable Value
- Slot 0, 1, 2 and 3 Variable Value
- Primary Variable Loop Current
- Device Status
- Battery Life

**Note:** Battery life is calculated by the transmitter. Refer to the transmitter’s manufacturer for details.

- PV Loop current
- Burst Rate
- Variable Status

Installation and Configuration

The IEC 62591 Interface module connects to the Emerson Wireless 781 Field Link through a four-wire connection. This allows the Wireless 781 Field Link to be strategically placed away from the controller in the optimal location for best network performance. The module provides 12 to 30 Vdc loop-output to power the Wireless 781 Field Link.

After installing the IEC 62591 Interface module and the Wireless 781 Field Link, you configure the FB107 with ROCLINK 800 Configuration Software to act as a gateway device. The FB107 can then receive signals from and transmit signals to WirelessHART field devices.

ROCLINK 800 provides you with a list of wireless field devices with the correct Network ID and Join Key. You can choose which of those devices are enabled (commissioned) on the network. You can also configure the update rate for individual devices.

You can install one IEC 62591 Interface module in a FB107. IEC 62591 Interface modules can be installed in any slot.

The module has a removable terminal block for convenient wiring and servicing. The terminal block can accommodate size 16 to 24 American Wire Gauge (AWG). A USB port is provided on the module to perform firmware updates and to provide debug information to support personnel.

The module is compatible with FB107 with firmware version 1.84 (or higher) and ROCLINK 800 version 2.55 (or higher).
Tested WirelessHART Devices

**Note:** The IEC 62591 Wireless Interface Module is designed to return the process and dynamic variables (PV, SV, TV, QV, SLOT 0, 1, 2, 3) from any device which meets the IEC 62591 specification (HCF_SPEC-285, Revision 2.0). The following table lists the devices which Emerson has tested and supports with the interface. If you have a WirelessHART device which does not appear in the table consult with the manufacturer of the device to determine whether the process variable values you want to collect are available through the PV, SV, TV, QV, and SLOT 0, 1, 2, and 3. If the device meets the discrete control specification, it should work with the IEC 62591 Wireless Interface; alternatively, it may be treated like an analog wireless device. Always test any WirelessHART devices not listed in table to see whether the process variable values you want to collect are available through the PV, SV, TV, QV, and SLOT 0, 1, 2, and 3. If the device meets the discrete control specification, it should work with the IEC 62591 Wireless Interface before you install them in the field. Also, always check with Remote Automation Solutions Lifecycle Services to verify that the firmware version of your device is supported in the IEC 62591 Wireless Interface.

### Environmental
- **Operating Temperature**: -40 to 85°C (-40 to 185°F)
- **Operating Humidity**: 0 to 90% relative humidity
- **EMC**: Complies with EN61326-1:2006

### Approvals
- **Telecommunication Compliance**: All wireless devices require certification to ensure that they adhere to regulations regarding the use of the RF spectrum. Nearly every country requires this type of product certification. Emerson is working with governmental agencies around the world to supply fully compliant products and remove the risk of violating country directives or laws governing wireless device usage.
- **FCC and IC**: This device complies with Part 15 of the FCC Rules. Operation is subject to the following conditions:
  - This device may not cause harmful interference. This device must accept any interference received, including interference that may cause undesired operation. This device must be installed to ensure a minimum antenna separation distance of 20 cm from all persons.
- **ETSI**: With firmware of version 1.11 and higher, this device complies with ETSI EN 300 328 V1.8.1.
- **Ordinary Location Certification for FM**: As standard, the Gateway has been examined and tested to determine that the design meets basic electrical, mechanical, and fire protection requirements by FM, a nationally recognized testing laboratory (NRTL) as accredited by the Federal Occupational Safety and Health Administration (OSHA).
- **North American Certifications**: I5 FM Intrinsically Safe, Non-Incendive, and Dust Ignition-proof
  - Certificate Number: 3040398
  - Intrinsically Safe for Class I, II, III, Division 1, Groups A, B, C, D, E, F, and G.
  - Zone Marking: Class I, Zone 0, AEx ia IIC
  - Temperature Codes T4 (Tamb = -40 to 70 °C)
  - Non-Incendive for Class I, Division 2, Groups A, B, C, and D.
  - Dust Ignition-proof for Class II, III, Division 1, Groups E, F, and G.
  - Ambient temperature limits: -40 to 70 °C
  - Enclosure Type 4X, IP66/67
Special Conditions of Certification

1. The Wireless 781 Field Link housing contains aluminum and is considered a potential risk of ignition by impact or friction. Take care during installation and use to prevent impact and friction.

2. The surface resistivity of the unit is greater than one gigaohm (GΩ). To avoid electrostatic charge build-up, do not rub or clean the unit with solvents or a dry cloth.

3. The 781 Field Link will not pass the 500Vrms dielectric strength test and this must be taken into account during installation.

CSA Intrinsically Safe
Certificate Number: 2330424
Intrinsically Safe for Class I, Division 1, Groups A, B, C, and D.
Temp Code T3C
Enclosure Type 4X, IP66/67
When installed per Rosemount Drawing 00781-1010

European Union Directive Information
The EC declaration of conformity for all applicable European directives for this product can be found on the Rosemount website at www.rosemount.com. A hard copy may be obtained by contacting your local sales representative.

ATEX Directive (94/9/EC)
Emerson Process Management complies with the ATEX Directive.

Electro Magnetic Compatibility (EMC) (2004/108/EC)
Emerson Process Management complies with the EMC Directive.

Emerson Process Management complies with the R&TTE Directive

### European Certification (continued)

#### Special Conditions for Safe Use (X)

1. The plastic antenna may present a potential electrostatic ignition hazard and must not be rubbed or cleaned with a dry cloth.

2. The Wireless 781 Field Link enclosure is made of aluminum alloy and is given a protective polyurethane paint finish; however, care should be taken to protect it from impact or abrasion if located in a zone 0 environment.

3. The device is not capable of withstanding the 500V isolation test required by EN60079-11:2007 Clause 6.3.12. This must be taken into account when installing the device.
